Note : Je traite uniquement les graphiques qu'on a pas analysé en cours, j'en ai selectionné 4 pour avoir des analyses variées.

Graphe 1 : Total brand sales in Europe

Data

1. ☒ The type of thé graphic is adapted to the nature of data (curve, bars, pie, histogram, cloud...) ;
2. ☐ Approximations/interpolation make sense ;
3. ☒ Curves are defined by a sufficient number of points ;
4. ☒ The building method of the curve is clear : interpolation (linear, polynomial,regression...) ;
5. ☐ Confidence intervals are visualized (or given separately) ;
6. ☐ Steps of histograms are adequate ;
7. ☐ Histograms visualize probabilities (from 0 to 1).

Graphical objects

1. ☐ Graphical objects are readable on screen, on printed version (B/W), on video... ;
2. ☐ Graphic range is standart, without too similar colors, without green (video) ;
3. ☒ Graphical axis are well identified and labelled ;
4. ☒ Scales and units are explicits ;
5. ☒ Curves cross without ambiguity ;
6. ☐ Grids help the reader.

Annotations

1. ☒ Axis are labelled by quantities ;
2. ☒ Labels of the axis are clear, and self contained ;
3. ☐ Units are indicated on the axis ;
4. ☒ Axes are oriented from the left to the right and from the bottom to the top ;
5. ☐ Origin is $(0, 0)$, if not it should be clearly justified ;
6. ☐ No hole on the axes.

Annotations (2)

6. ☐ For bar graphs/histograms order of bars is based on classical ordering (alphabetical, temporal, from the best to the worse) are better than a random order ;
7. ☒ Each curve has a legend ;
8. ☐ Each bar has a legend ;

Information

1. ☒ Curves are on the same scale ;
2. ☒ The number of curves on a same graph is small (less than 6) ;
3. ☒ Compare curves on a same graphic ;
4. ☒ A curve cannot be removed without reducing the information ;
5. ☒ The graphic gives a relevant information to the reader ;
6. ☐ If the vertical axis shows averages, it should indicates error bars ;
7. ☐ It is not possible to remove any objet without modifying the readability of the graphic.

Context

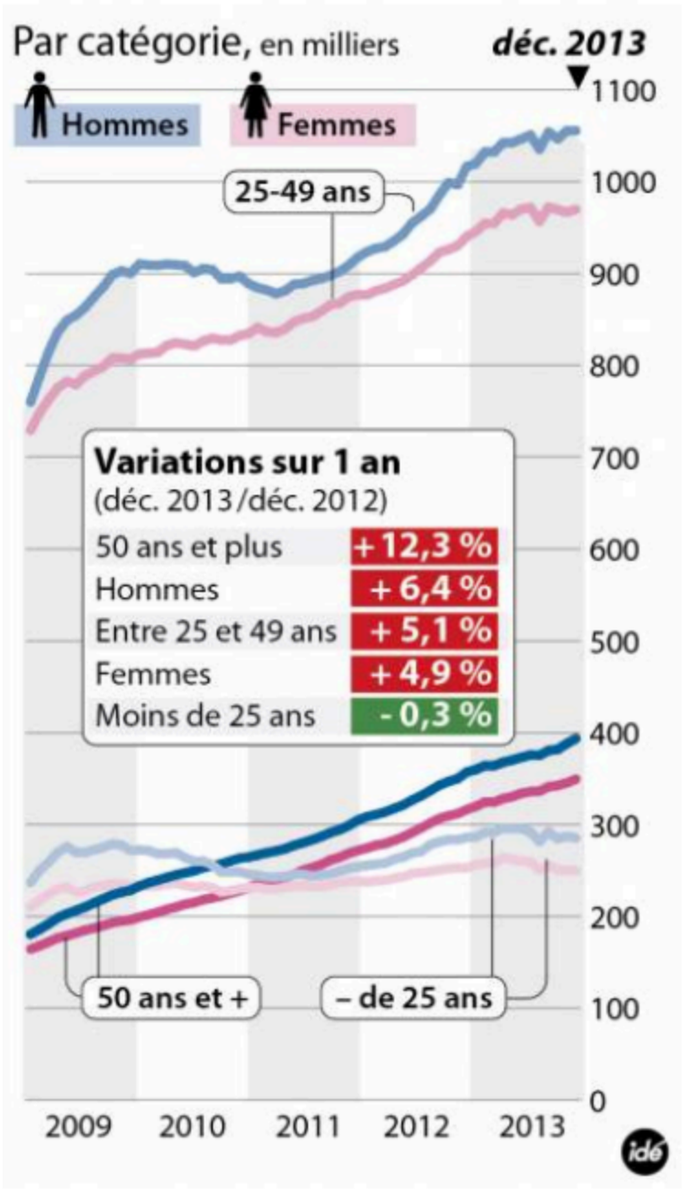

1. ☐ All the symbols are defined and referenced in the text ;
2. ☒ The graphic produces more information than any other representation (choice of the variable) ;
3. ☒ The graphic has a title ;
4. ☐ The title is sufficiently self contained to partially understand the graphic ;
5. ☐ The graphic is referenced in the text ;
6. ☐ The text comment the figure.

Last but not least : **The graphical representation should be elegant**

✓

Ce graphe est bien réalisé, il est adapté au données et est compréhensible.

Graphe 2 : Le chômage

Data

1. ☒ The type of thé graphic is adapted to the nature of data (curve, bars, pie, histogram, cloud...) ;
2. ☐ Approximations/interpolation make sense ;
3. ☒ Curves are defined by a sufficient number of points ;
4. ☒ The building method of the curve is clear : interpolation (linear, polynomial,regression...) ;
5. ☐ Confidence intervals are visualized (or given separately) ;
6. ☐ Steps of histograms are adequate ;
7. ☐ Histograms visualize probabilities (from 0 to 1).

Graphical objects

1. ☐ Graphical objects are readable on screen, on printed version (B/W), on video... ;
2. ☐ Graphic range is standart, without too similar colors, without green (video) ;
3. ☐ Graphical axis are well identified and labelled ;
4. ☒ Scales and units are explicits ;
5. ☒ Curves cross without ambiguity ;
6. ☒ Grids help the reader.

Annotations

1. ☒ Axis are labelled by quantities ;
2. ☒ Labels of the axis are clear, and self contained ;
3. ☒ Units are indicated on the axis ;
4. ☒ Axes are oriented from the left to the right and from the bottom to the top ;
5. ☐ Origin is $(0, 0)$, if not it should be clearly justified ;
6. ☐ No hole on the axes.

Annotations (2)

6. ☐ For bar graphs/histograms order of bars is based on classical ordering (alphabetical, temporal, from the best to the worse) are better than a random order ;
7. ☐ Each curve has a legend ;
8. ☐ Each bar has a legend ;

Information

1. ☒ Curves are on the same scale ;
2. ☐ The number of curves on a same graph is small (less than 6) ;

3. ☐ The graphic has a title ;
4. ☐ The title is sufficiently self contained to partially understand the graphic ;
5. ☐ The graphic is referenced in the text ;
6. ☐ The text comment the figure.

Last but not least : **The graphical representation should be elegant**

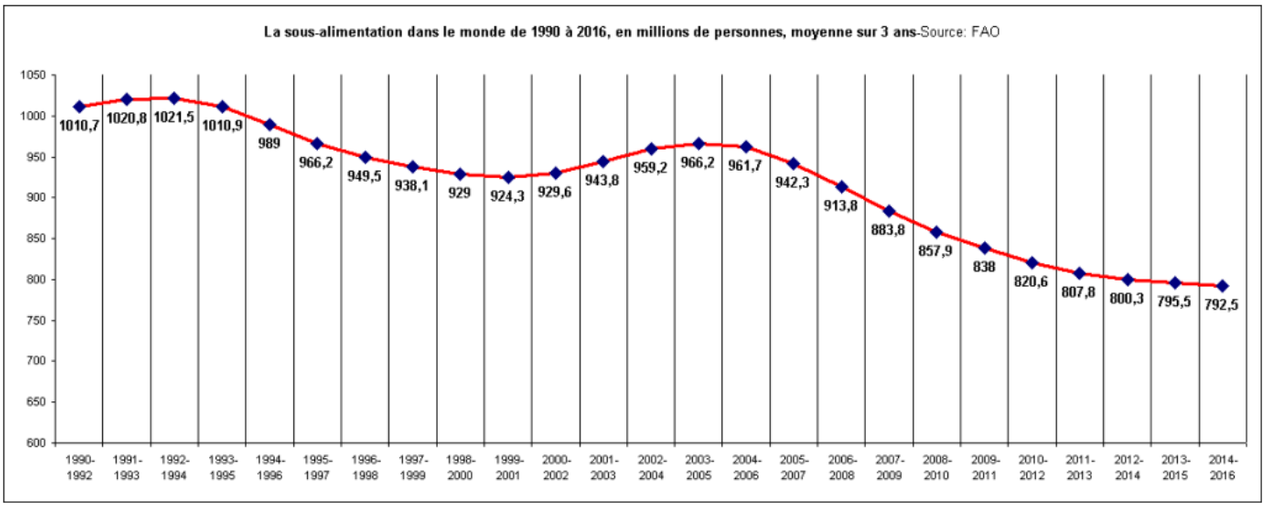

✕

Ce graphe contient beaucoup trop d'informations, la case au centre avec des stats invisibilise le graphe et surcharge cognitivement le lecteur, la légende dans l'image doit être déplacée sur le côté pour rendre le graphe plus léger, aussi il serait peut-être mieux de faire deux graphes séparés mais dans la version que

je propose je décide d'en garder un seul je pense que les deux solutions sont possibles.

Graphe 3 : Sous alimentation dans le monde

Data

1. ☒ The type of thé graphic is adapted to the nature of data (curve, bars, pie, histogram, cloud...) ;
2. ☒ Approximations/interpolation make sense ;
3. ☒ Curves are defined by a sufficient number of points ;
4. ☒ The building method of the curve is clear : interpolation (linear, polynomial,regression...) ;
5. ☐ Confidence intervals are visualized (or given separately) ;
6. ☐ Steps of histograms are adequate ;
7. ☐ Histograms visualize probabilities (from 0 to 1).

Graphical objects

1. ☒ Graphical objects are readable on screen, on printed version (B/W), on video... ;
2. ☒ Graphic range is standart, without too similar colors, without green (video) ;
3. ☒ Graphical axis are well identified and labelled ;
4. ☐ Scales and units are explicits ;
5. ☐ Curves cross without ambiguity ;
6. ☒ Grids help the reader.

Annotations

1. ☒ Axis are labelled by quantities ;
2. ☒ Labels of the axis are clear, and self contained ;
3. ☒ Units are indicated on the axis ;
4. ☒ Axes are oriented from the left to the right and from the bottom to the top ;
5. ☐ Origin is $(0, 0)$, if not it should be clearly justified ;
6. ☐ No hole on the axes.

Annotations (2)

6. ☐ For bar graphs/histograms order of bars is based on classical ordering (alphabetical, temporal, from the best to the worse) are better than a random order ;
7. ☒ Each curve has a legend ;
8. ☐ Each bar has a legend ;

4. ☒ The title is sufficiently self contained to partially understand the graphic ;
5. ☐ The graphic is referenced in the text ;
6. ☐ The text comment the figure.

Last but not least : **The graphical representation should be elegant**

✓

Ce graphe est parfait, la seule question que je me pose c'est est-ce que c'est vraiment nécessaire de rajouter des points avec des valeurs alors que l'axe donne déjà une échelle ? Mais je trouve que le graphe n'est pas surchargé pour autant.

Graphe 4 : Arrestation Adolescents

Data

1. ☒ The type of thé graphic is adapted to the nature of data (curve, bars, pie, histogram, cloud...) ;
2. ☒ Approximations/interpolation make sense ;
3. ☒ Curves are defined by a sufficient number of points ;
4. ☒ The building method of the curve is clear : interpolation (linear, polynomial,regression...) ;
5. ☐ Confidence intervals are visualized (or given separately) ;
6. ☐ Steps of histograms are adequate ;
7. ☐ Histograms visualize probabilities (from 0 to 1).

Graphical objects

1. ☒ Graphical objects are readable on screen, on printed version (B/W), on video... ;
